

Assignment 0

Scripting Introduction

Instructions

For this exercises, create a Powershell scripts as described in the exercise instructions. Save this script in a separate files named A0En.ps1, where n is the exercise number. For exercise 1 this means your file name would be **A0E1.ps1**. Submit this script file to Gradescope Assignment 0.

The hardest script you'll ever make is the first one! Everyone started somewhere and you're about to begin a great journey.

Exercise 1

We are going to make a powershell script that simply displays some stuff to the screen. Exercise requirements are always in bullet point lists like this.

- Create a script that says exactly: **My name is [Your Name] and I am going to ROCK this course!**
- The phrase is case sensitive
- You must replace **[Your name]** with your name (or any word other than my name)

This is the expected output:

```
PS C:\Users\Abe\Code> A0E1.ps1
My name is Abe and I am going to ROCK this course!
```

In order to do this, I am going to give you all the code. Copy and paste everything below into a new text file (Try using Visual Studio Code) and save it as **A0E1.ps1** anywhere on your hard drive, but remember which folder you saved it in!

```
# This is your first script
# These are comments, they don't actually do anything in the code.
# All of this will make more sense as we go through the course!

$name = "Abe"

Write-Output "My name is $name and I am going to ROCK this course!"

# Copy and paste all of this into a file and
# save it as A0E1.ps1

# We will then upload it to Gradescope to see how we did!
```

Excellent. You are going to do great!
